6. TERMS OF REFERENCE

1. PURPOSE

The IUCMA is the water resource management authority established in terms of Section 78 of the National Water Act 36 of 1998 (NWA), to perform water resource management at local level within the WMA. The management of the resources entails protection, use, development, conservation, management, and control of water resources within the WMA as contemplated in the National Water Act (Act 36 of 1998; NWA). The IUCMA is also responsible for local water resources planning and operation of water resources within Inkomati-Usuthu Water Management Area. However, the WMA suffers from water requirements exceeding available water sources and the issue of water security to meet the growing water requirements require strategies in place to ensure the vision for the Catchment Management Agency (CMA) is met. Water security in South Africa relates to managing and reducing water-related risks to a level at which water's benefits can be securely and sustainably realized in totality, with a paradigm shift to new reality.

2. BACKGROUND

Rainwater harvesting (RWH) have the potential to improve rural water supply and contribute to the provision of the first 6 kl of water consumed monthly. RWH can also be the solution to South Africa food security by increasing water productivity of dryland agriculture and enabling homestead gardening. Although used for decades in South Africa, rainwater harvesting (RWH) is still far from being utilised to its full potential as unresolved challenges prevent its wide scale adoption. Key challenges preventing the nationwide expansion of RWH are the current water related legislations, the lack of finances and the absence of a national umbrella body that coordinates. The IUCMA and EDM is planning to embark on rainwater harvesting project in identified villages in the municipal districts of the Inkomati-Usuthu Water Management Area as part of water and food security strategies.

3. AIMS AND OBJECTIVES

The IUCMA is therefore sought to appoint a suitably qualified Service Provider for design, supply and install and train on the use of rainwater harvesting facilities on selected households within Ehlanzeni District Municipality.

3.1 The main aim of having rainwater harvesting facilities and provision of crop production specialist services:

- To improve water supply to small scale irrigation gardens.
- To promote efficient use of water and access to water by small-holder farmers (rural households)
- To ensure food security through the support of small-holder farmers with efficient irrigation solutions
- To support rural households with diversified irrigation solutions.

4. SCOPE OF WORK/ DELIVERABLES

The Inkomati-Usuthu Catchment Management Agency (IUCMA) requires the services of suitably qualified service providers to submit proposals to assist the Agency in establishing rainwater harvesting facilities in selected households as a water security strategy and provide crop production specialist services to enhance food security.

The preferred service provider for the rainwater harvesting services will be required to:

- Design and provide drawings for rainwater harvesting system per household.
- Provide all layouts for the rainwater harvesting facilities per identified household.
- Provide all costs related to the projects in agreement with the client.
- Install a complete rainwater harvesting system per identified household.
- Train the beneficiaries on the use and advantages of the facilities.

A well-designed rainwater harvesting system collects the maximum possible amount of water from the roof and ensures that the water is stored in the tank.

The components of a rainwater system are Rain Heads, Gutter Accessories, Pre-Tank Filtration, Rainwater Tanks, Tank Gauges, Tank Accessories, Booster pump and Concrete Platform.

The duties of the crop production specialist must include at least the following:

- Compile a comprehensive production system (production plan irrigation schedule, spray programme, etc); for all identified sites;
- Prepare and submit a SMART implementation plan to outline technical support;
- Diagnose crop problems and rehabilitation thereof;
- Provide planting demonstrations & training (soil preparation, irrigation duration, crop growth stages, fertilizer programme, harvesting techniques, post-harvest management);
- Advise beneficiaries in areas such as growing and harvesting practices, choice of machinery and equipment; etc.
- Solve problems (e.g., nutrient disorders in plants, management of weeds and plant diseases) and create solutions, including organizing and conducting field trials;
- Foster a cooperative system amongst the beneficiaries and help them to develop a functional marketing system (in the event of surplus production);
- Schedule and make regular visits to beneficiaries to render technical support;

The crop production specialist will be responsible for systematically developing a comprehensive production system, crop management and skills transfer to the selected centres/ beneficiaries.

5. PROJECT LOCATION AND PERIOD

The project will be executed within Ehlanzeni District Municipality in the Inkomati-Usuthu Water Management Area over a period of twelve (12) months effective from the date of the signing of the contract.

6. RESOURCES REQUIRED

The team shall be led by a professional registered Civil/ Agricultural Engineer. The other team members should include Site Agent, Plumber, and Production specialist.
